

Case Study

Anaerobic Digestion Feasibility Report Histon, Cambridgeshire

Completed: Oct 2014

Objectives

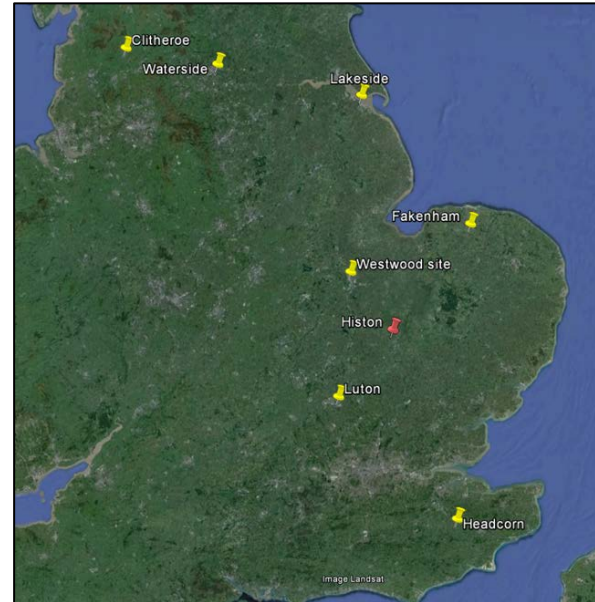

- Investigate the feasibility of upgrading an existing Anaerobic Digester to receive additional food waste, sourced from across the clients national operations.
- Investigate the financial business case.
- Investigate the project risk associated with obtaining planning, grid connection and environmental permits for the site.

Client

- Hain Daniels Group, Nationwide commercial food producer

Delivery

- Undertake an information gathering exercise to ascertain the volumes of food waste available.
- Run these volumes through comprehensive AD models.
- Gather and compile all relevant information relating to project risk into a comprehensive feasibility study.
- Provide ongoing support to the client should they choose to pursue this option.
